Nuclear Waste

I agree with the Richard A. Muller's point that the public is overprotective against storing nuclear waste and that even if all the waste got out of the containers it wouldn't do much damage to the water supply but the author should also talk about nuclear fission vs nuclear fusion.

"Nuclear fusion cannot create nuclear waste and a nuclear accident while fission creates waste and has the potential to have an accident. The problem with fusion is that it is still in the works and it might be completed by 2050"(www.iaea.org).
